

# BASIC DIAGRAMS FOR COAX ELECTRONIC VIDEO DOOR PHONE SYSTEMS

index on page 54

Download from:  
[www.urmetdomus.com](http://www.urmetdomus.com)  
Technical Manuals area

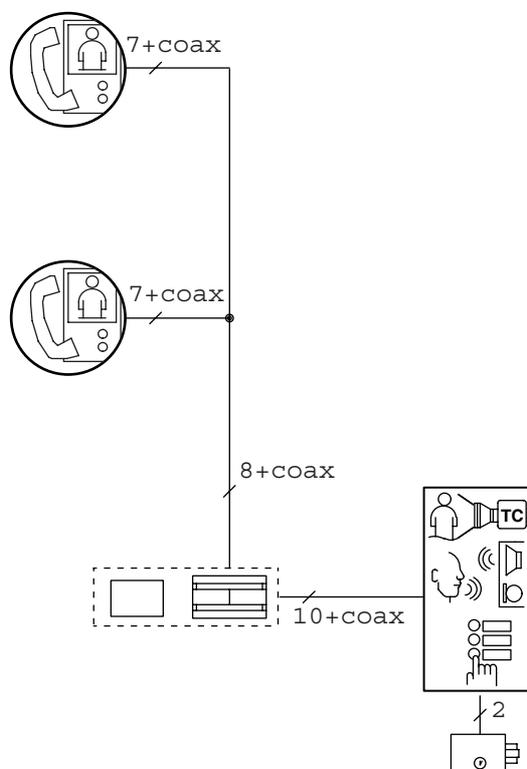

## FUNCTION

This system allows connection between the video outdoor station and the various video door phones situated in the apartments. When the visitor presses a button on the push button panel, the bitonal electronic call is sent to the corresponding video door phone loudspeaker and, after about 7 seconds, the image appears on the screen.

At this point the user sees the visitor and can answer, if he wishes, unhooking the handset. At the end of the conversation, the electric lock can be operated by pressing the key (🔑).

Vision of the image lasts about 60 seconds, after which the intervention of the built-in timer in the power supply causes it to go off. If a second video door phone is called before the end of the 60 seconds, the first video door phone will automatically go off and the latter comes on. This feature guarantees secrecy of vision.

## EQUIPMENT

The following devices are needed for the system illustrated in diagram SV102-3146D:

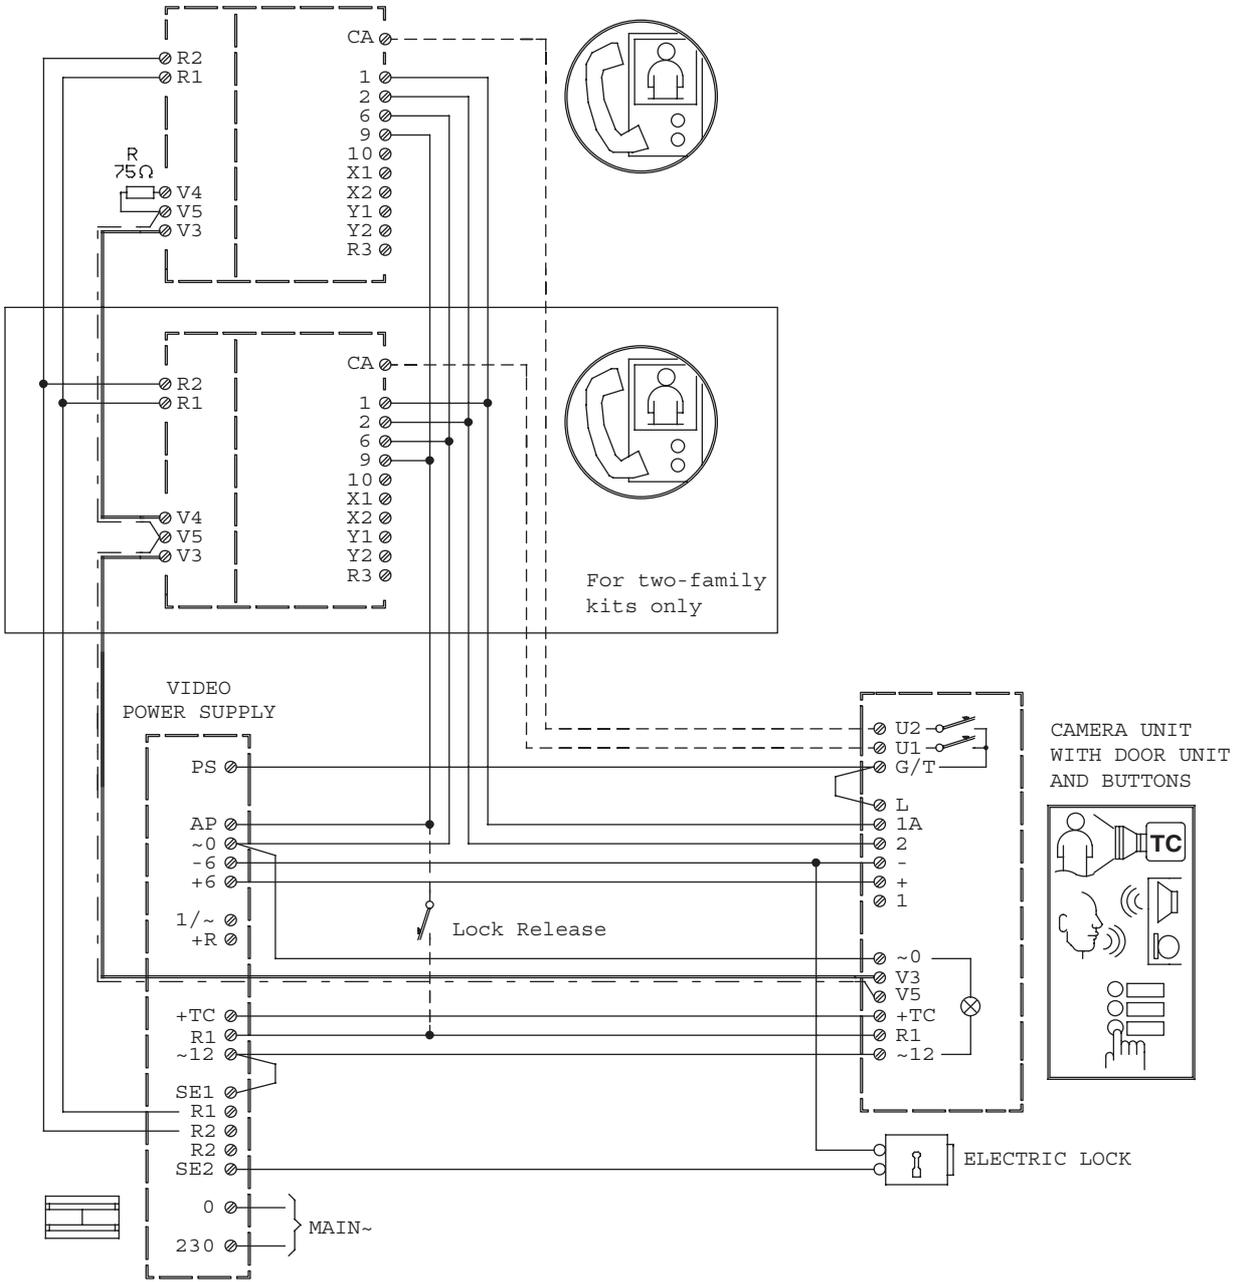

### “COAX” VIDEO DOOR PHONE KIT DIAGRAMS

- N. 1 One-family kit (1 button)  
with Atlantico video door phone **Ref. 1702/611**  
consisting of:
- Sinthesi camera with integrated door unit and 1 calling button Ref. 1745/81
  - 1 Atlantico video door phone Ref. 1702/1 with bracket Ref. 1202/90
  - 1 flush mounting box for 1 module Ref. 1145/51
  - Module holder with frame for 1 module Ref. 1145/61
  - Power unit 230Vac-38VA, 10 DIN modules Ref. 789/5B
- or
- N. 1 One-family kit (1 button)  
with Artico video door phone **Ref. 1705/621**  
consisting of:
- Sinthesi camera with integrated door unit and 1 calling button Ref. 1745/81
  - 1 Artico video door phone Ref. 1705/1 with bracket Ref. 1705/90
  - 1 flush mounting box for 1 module Ref. 1145/51
  - Module holder with frame for 1 module Ref. 1145/61
  - Power unit 230Vac-38VA, 10 DIN modules Ref. 789/5B
- or
- N. 1 Two-family kit (2 buttons)  
with Atlantico video door phone **Ref. 1702/612**  
consisting of:
- Sinthesi camera with integrated door unit and 2 calling buttons Ref. 1745/82
  - 2 Atlantico video door phones Ref. 1702/1 with bracket Ref. 1202/90
  - 1 flush mounting box for 1 module Ref. 1145/51
  - Module holder with frame for 1 module Ref. 1145/61
  - Power unit 230Vac-38VA, 10 DIN modules Ref. 789/5B
- or
- N. 1 Two-family kit (2 buttons)  
with Artico video door phone **Ref. 1705/622**  
consisting of:
- Sinthesi camera with integrated door unit and 2 calling buttons Ref. 1745/82
  - 2 Artico video door phones Ref. 1705/1 with bracket Ref. 1705/90
  - 1 flush mounting box for 1 module Ref. 1145/51
  - Module holder with frame for 1 module Ref. 1145/61
  - Power unit 230Vac-38VA, 10 DIN modules Ref. 789/5B

TO THE FOLLOWING VIDEO DOOR PHONES

## CONNECTION OF 1 VIDEO DOOR PHONE TO 1 VIDEO OUTDOOR STATION

### Possibility of automatic activation of a second control tv camera

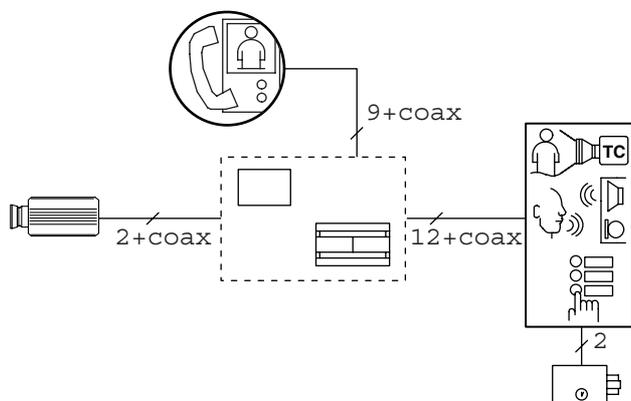

**urmet**  
DOMUS

### FUNCTION

This system is particularly suitable in one-family villas. The video door phone, besides being connected to a TV camera unit, can self-insert on a secondary control TV camera by pressing the service button  $\diamond$ . An internal closed TV circuit system is thus made, which allows the control of a room (i.e. children's room) and the outside entrance at any time.

The secondary TV camera is turned on for about a minute, after which it automatically turns off. In any case, a call from the video outdoor station automatically switches the video door phone to the external TV camera unit thus excluding the second TV camera; in order to reset the latter, it is sufficient to press the service key  $\diamond$  when the conversation with the video outdoor station is over.

With the other service key  $\circ$  it is possible to self-insert also on the video outdoor station.

## CONNECTION OF SEVERAL VIDEO DOOR PHONES TO 2 VIDEO OUTDOOR STATIONS

**urmet**  
DOMUS

### FUNCTION

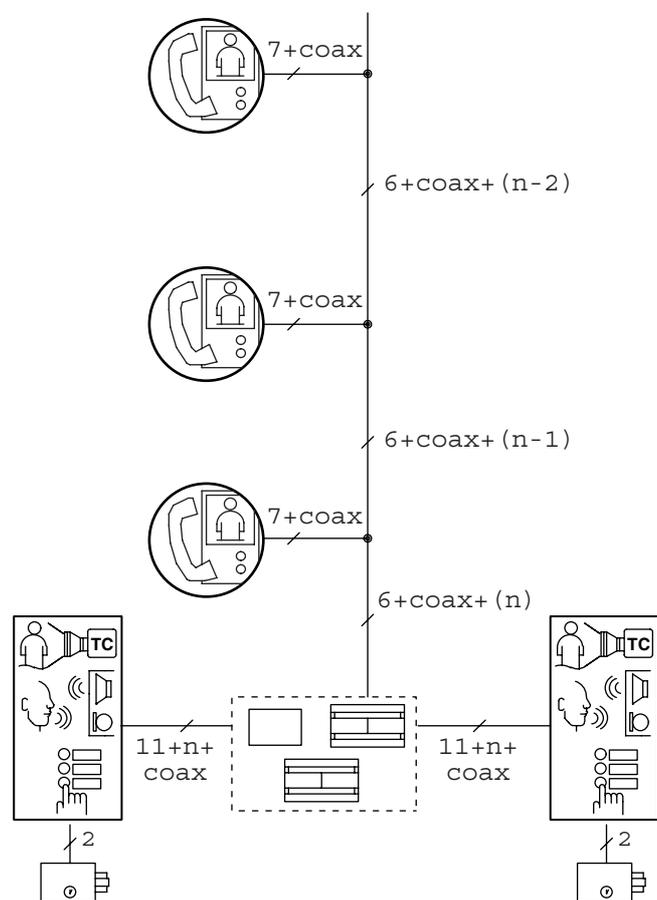

This system allows the connection of a column of video door phones to 2 video outdoor stations with automatic switching.

When a visitor presses a call button on one of the two push button panels, in the called apartment the bitonal electronic call is sent to the corresponding video door phone loudspeaker and the image appears on the screen after about 8 seconds.

During this phase, the relay box automatically inserts the relative loudspeaking unit and TV camera, excluding the other video outdoor station from the service.

At this point, the user sees the visitor and may respond, if desired, lifting the handset. At the end of the call, only the electric lock of the entrance concerned is activated pressing the key .

If, during a conversation, a call is made from the other push button panel towards another video door phone, the first will automatically switch off and the last video door phone called will be activated. It is not possible therefore to communicate with the 2 video outdoor stations at the same time in that they operate alternatively and are mutually exclusive.

### EQUIPMENT

## CONNECTION OF SEVERAL VIDEO DOOR PHONE GROUPS TO 1 VIDEO DOOR UNIT AND 1 DOOR UNIT

**urmet**  
DOMUS

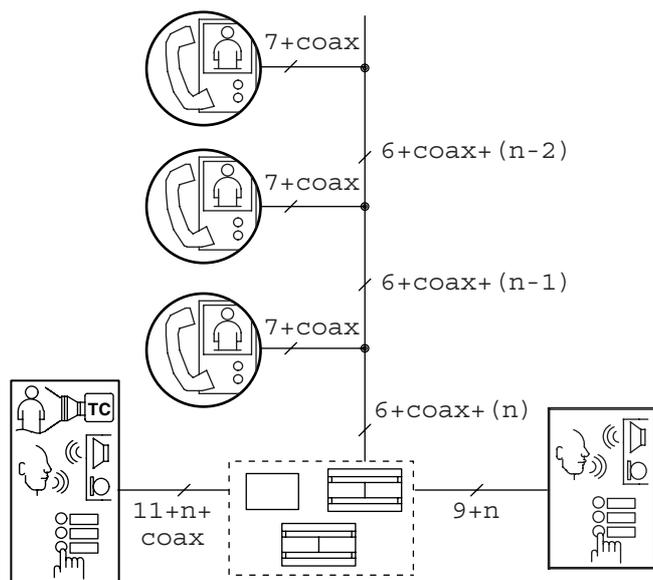

### FUNCTION

This type of system is used to connect a video door phone column to an automatically switching video door unit or door unit.

A two-tone electronic call is sent to the corresponding video door phone speaker when a call button is pressed on either of the two panels; the picture appears on the screen after approximately seven seconds if the call was made by the video door unit.

The video door phone will not light up and the video door phone will work as a normal door phone if the call is made from the camera unit and panel.

Press  at the end of the call to open the concerned door electrical lock only.

## CONNECTION OF SEVERAL VIDEO DOOR PHONES TO 4 VIDEO OUTDOOR STATIONS

### FUNCTION

This system allows the connection of a column of video door phones to 4 video outdoor stations with automatic switching. Therefore, it is suitable for a building with 4 entrances common to all apartments. When a visitor presses a call button on one of the two push button panels, in the called apartment the bitonal electronic call is sent to the corresponding video door phone loudspeaker and the image appears on the screen after about 7 seconds. During this phase, the relay box automatically inserts the relative loudspeaking unit and TV camera, excluding the other video outdoor station from the service. At this point, the user sees the visitor and may respond, if desired, lifting the handset. At the end of the call, only the electric lock of the entrance concerned is activated pressing the key . If, during a conversation, a call is made from the other push button panel towards another video door phone, the first will automatically switch off and the last video door phone called will be activated. In this system it is not possible to speak simultaneously from the four outdoor stations because they work one at a time in automatic switching.

## CONNECTION OF SEVERAL VIDEO DOOR PHONE COLUMNS TO A MAIN VIDEO OUTDOOR STATION

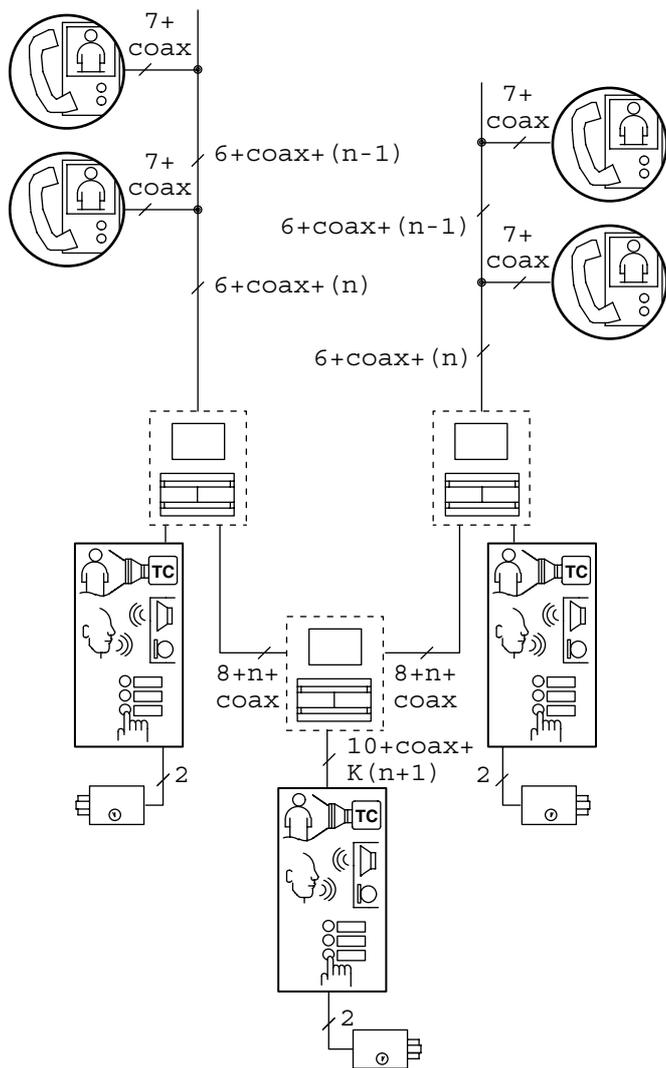

Each column is connected to 1 proper secondary video outdoor station

### FUNCTION

This system is particularly suitable for residential properties where it is necessary to connect the single villas to a proper video outdoor station and to a common one located at the main entry.

During calling the video door phone is automatically switched on the main video outdoor station or to the secondary one of its own group, by means of the switching relay. The services for secondary video outdoor stations are independent, so that they be realized simultaneously. When the call is coming from the main video outdoor station, only the group of the called video door phone is switched on it, the other ones continue to service towards the secondary.

BASIC SYSTEM DIAGRAMS

## CONNECTION OF 3 INTERCOM VIDEO DOOR PHONES WITH POSSIBILITY OF ANSWERING CALLS FROM 1 ELECTRICAL VIDEO DOOR UNIT

### Single call from outside with concurrent power-on

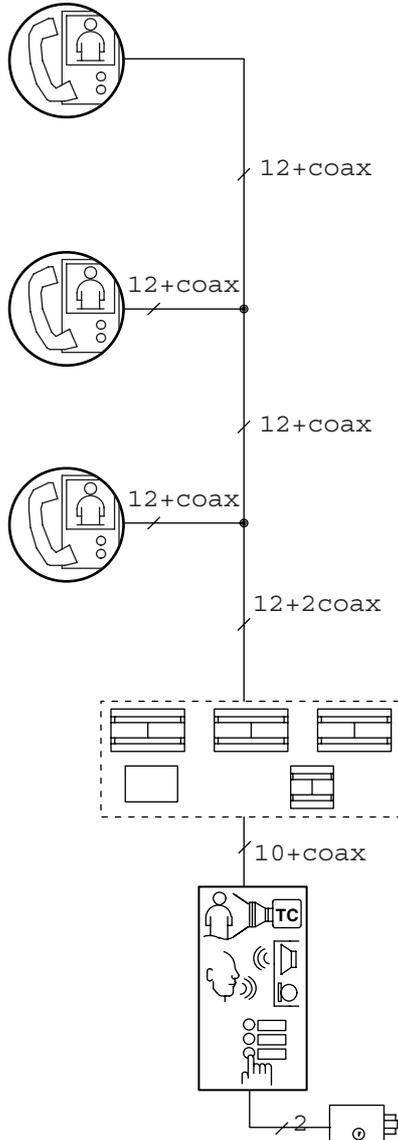

### FUNCTION

This system is particularly suited for detached houses where the video door phones provide the intercom service and can also be called at the same time in parallel by the video outdoor station. Switching from one service to another is automatic and is assured during the call phase by a relay device.

When the intercom service is activated, listening to the conversation from the loudspeaking unit of the video outdoor station is excluded. If a call is made from the video outdoor station during an intercom conversation, all the video door phones are automatically switched to the outside.

Extra buzzers are used for intercom calls; for external calls from the video outdoor station, the two-tone electronic call is sent to the loudspeaker of the handset of the video door phone concerned.

The and service keys are used for intercom calls. When the video door phones are called in parallel by the video outdoor station, they switch on at the same time. At the end of the conversation, the electric lock is released pressing the key . Viewing lasts approximately 60 seconds, after which it is interrupted automatically following tripping of the timer incorporate in the power supply.

SV102-2972D

## CONNECTION OF 3 INTERCOM Atlantico VIDEO DOOR PHONES WITH POSSIBILITY OF ANSWERING CALLS FROM 2 ELECTRICAL VIDEO DOOR UNITS

The video outdoor stations call the video door phones in parallel with concurrent power-on

**urmet**  
DOMUS

### FUNCTION

The 3 video door phones perform the intercom service and can be called at the same time in parallel by one of the two video outdoor stations.

Switching to the three services is automatic and is assured during the call phase by a relay device.

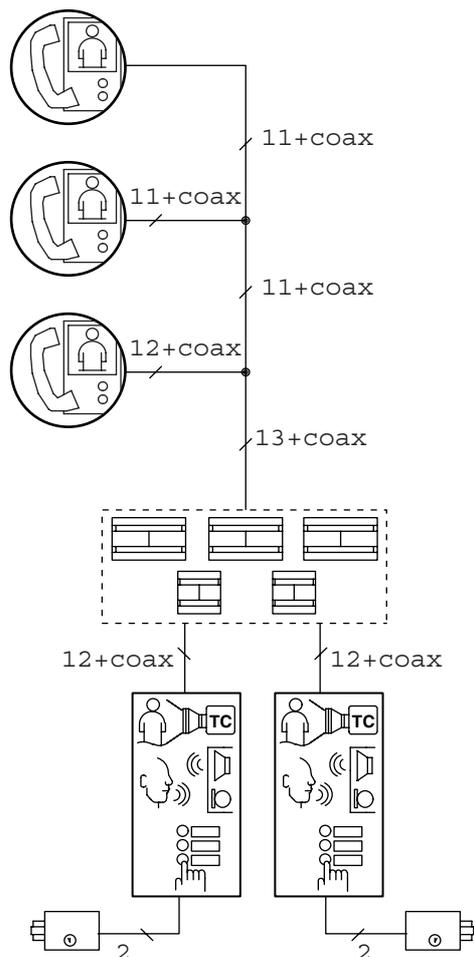

When the intercom service is activated, listening to the conversation from the loudspeaking units of the video outdoor stations is excluded. If a call is made from the one of the two video outdoor stations during an intercom conversation, all the video door phones are automatically switched to the entrance from which the call has been sent.

Therefore, concurrent communication with the 2 video outdoor stations is not possible in that either one or the other of these operates alternatively, in mutual exclusion.

Extra buzzers are used for the intercom calls while for those of the video outdoor stations, the two-tone electronic call is sent to the loudspeaker of the handset of the video door phone concerned.

When the video door phones are called in parallel by the one of the two video outdoor stations, they switch on at the same time. At the end of the conversation, only the electric lock of the entrance concerned is released pressing the key .

Viewing lasts approximately 60 seconds, after which it is interrupted automatically following tripping of the timer incorporate in the power supply.

SV102-1469D

SV102-1574C

## CONNECTION OF 3 VIDEO DOOR PHONE EXTENSIONS IN PARALLEL TO A SYSTEM WITH VIDEO DOOR UNIT

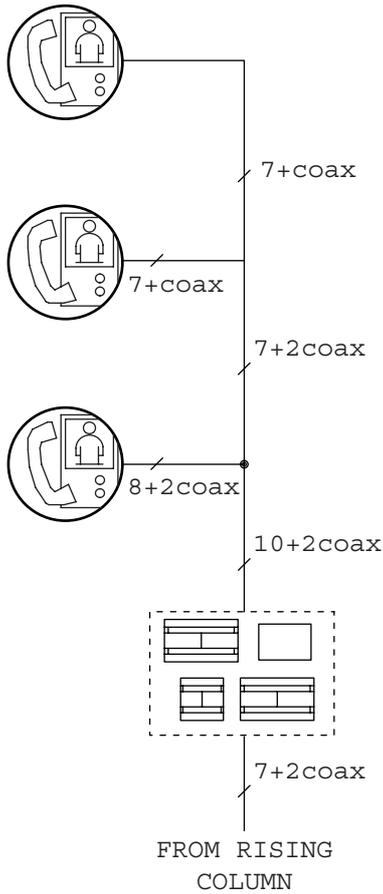

The video door phones are called at the same time

### FUNCTION

The system is particularly suitable to be installed in buildings where three video door phones belonging to a more complex system with video door phone unit must be called and switched on at the same time by one only call button.

Since the video power unit cannot power more than one video door phone, a supplementary local power unit is needed to power video door phones 2 and 3.

## CONNECTION OF N VIDEO DOOR PHONES TO 1 VIDEO DOOR UNIT

Distance between video door phone and video door unit in the range from 300 to 1000 metres

**urmet**  
DOMUS

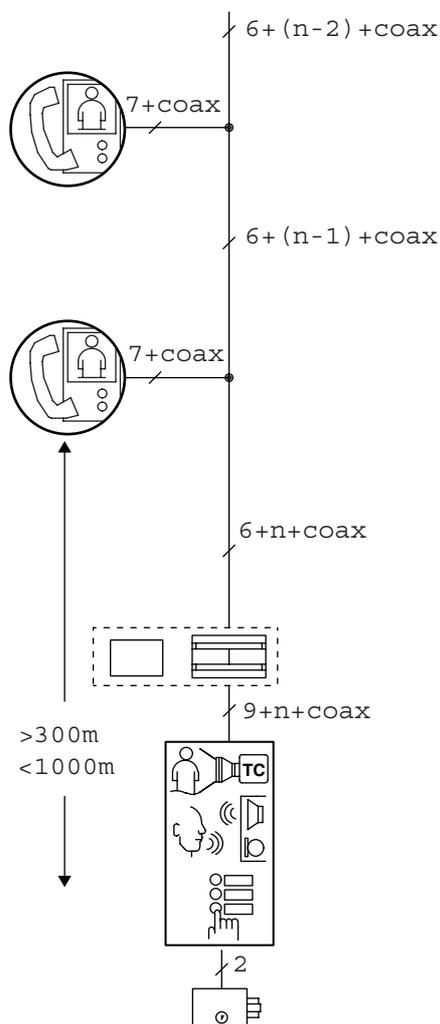

### FUNCTION

The system allows the connection between the video door phone unit and the various video door phones located in the apartments also when the distance between them is higher than 300 m and lower than 1000m.

When the visitor presses a button on the push button panel, the bitonal electronic call is sent to the corresponding video door phone loudspeaker and, after about 7 seconds, the image appears on the screen.

At this point the user sees the visitor and can answer, if he wishes, unhooking the handset. At the end of the conversation, the electric lock can be operated by pressing the key (🔑).

Vision of the image lasts about 60 seconds, after which the intervention of the built-in timer in the power supply causes it to go off. If a second video door phone is called before the end of the 60 seconds, the first video door phone will automatically go off and the latter comes on. This feature guarantees secrecy of vision.

## CONNECTION OF N FREE-HANDS UTOPIA COLOUR VIDEO DOOR PHONES TO 1 VIDEO DOOR UNIT AND TO 1 DOOR UNIT

**urmet**  
DOMUS

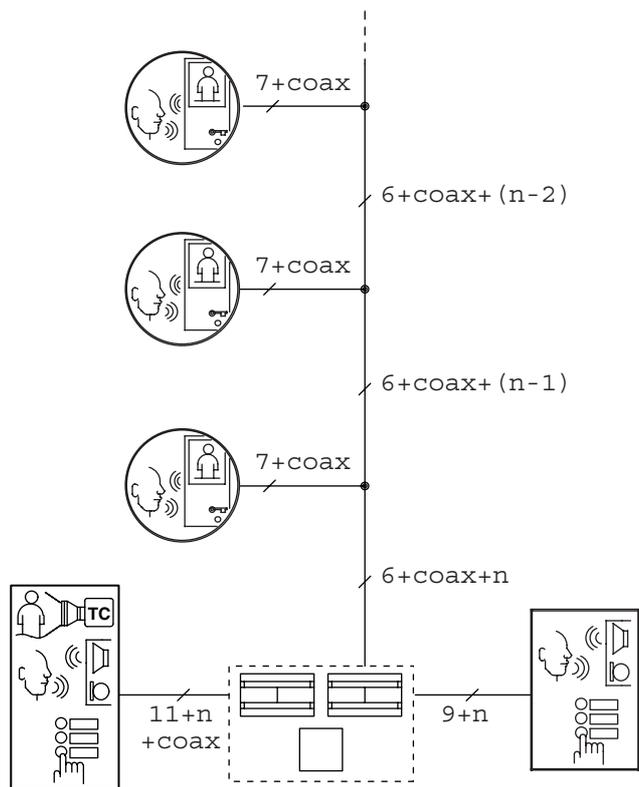

### FUNCTION

This type of system is used to connect a video door phone column to an automatically switching video door unit or door unit.

A two-tone electronic call is sent to the corresponding video door phone speaker when a call button is pressed on either of the two panels; the picture appears on the screen after approximately seven seconds if the call was made by the video door unit.

The video door phone monitor will be blank and will work as a regular free-hands door phone if the call is received from the door unit.

Press  at the end of the call to open the concerned door electrical lock only.

TO THE FOLLOWING VIDEO DOOR PHONES

## CONNECTION OF N FREE-HANDS COLOUR VIDEO DOOR PHONE COLUMNS TO 1 MAIN VIDEO DOOR UNIT

Each column is additionally connected to a specific secondary door unit

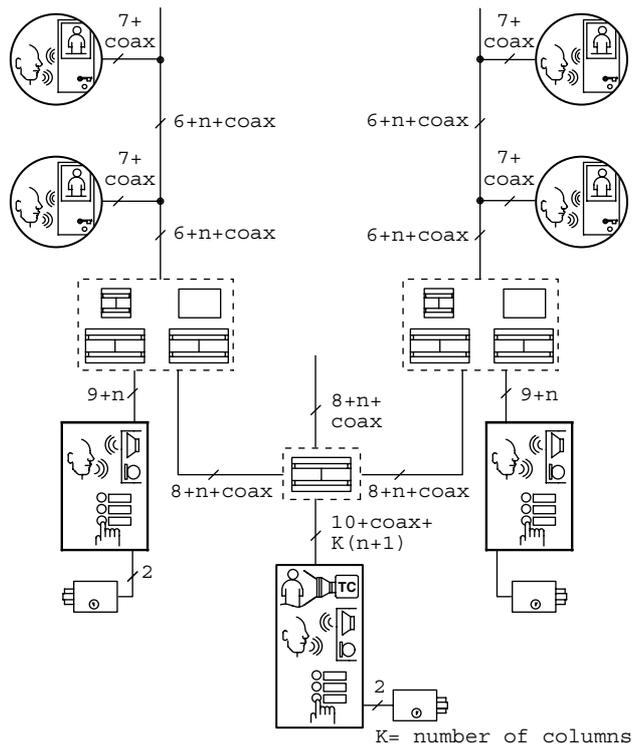

**urmet**  
DOMUS

### FUNCTION

This system is particularly suitable for residential properties where it is necessary to connect the single villas to a proper video outdoor station and to a common one located at the main entry.

During calling the video door phone is automatically switched on the main video outdoor station or to the secondary one of its own group, by means of the switching relay. The services for secondary video outdoor stations are independent, so that they be realized simultaneously.

When the call is coming from the main video outdoor station, only the group of the called video door phone is switched on it, the other ones continue to service towards the secondary.

SERIES CONNECTION  
The cable goes in and comes out from each video door phone

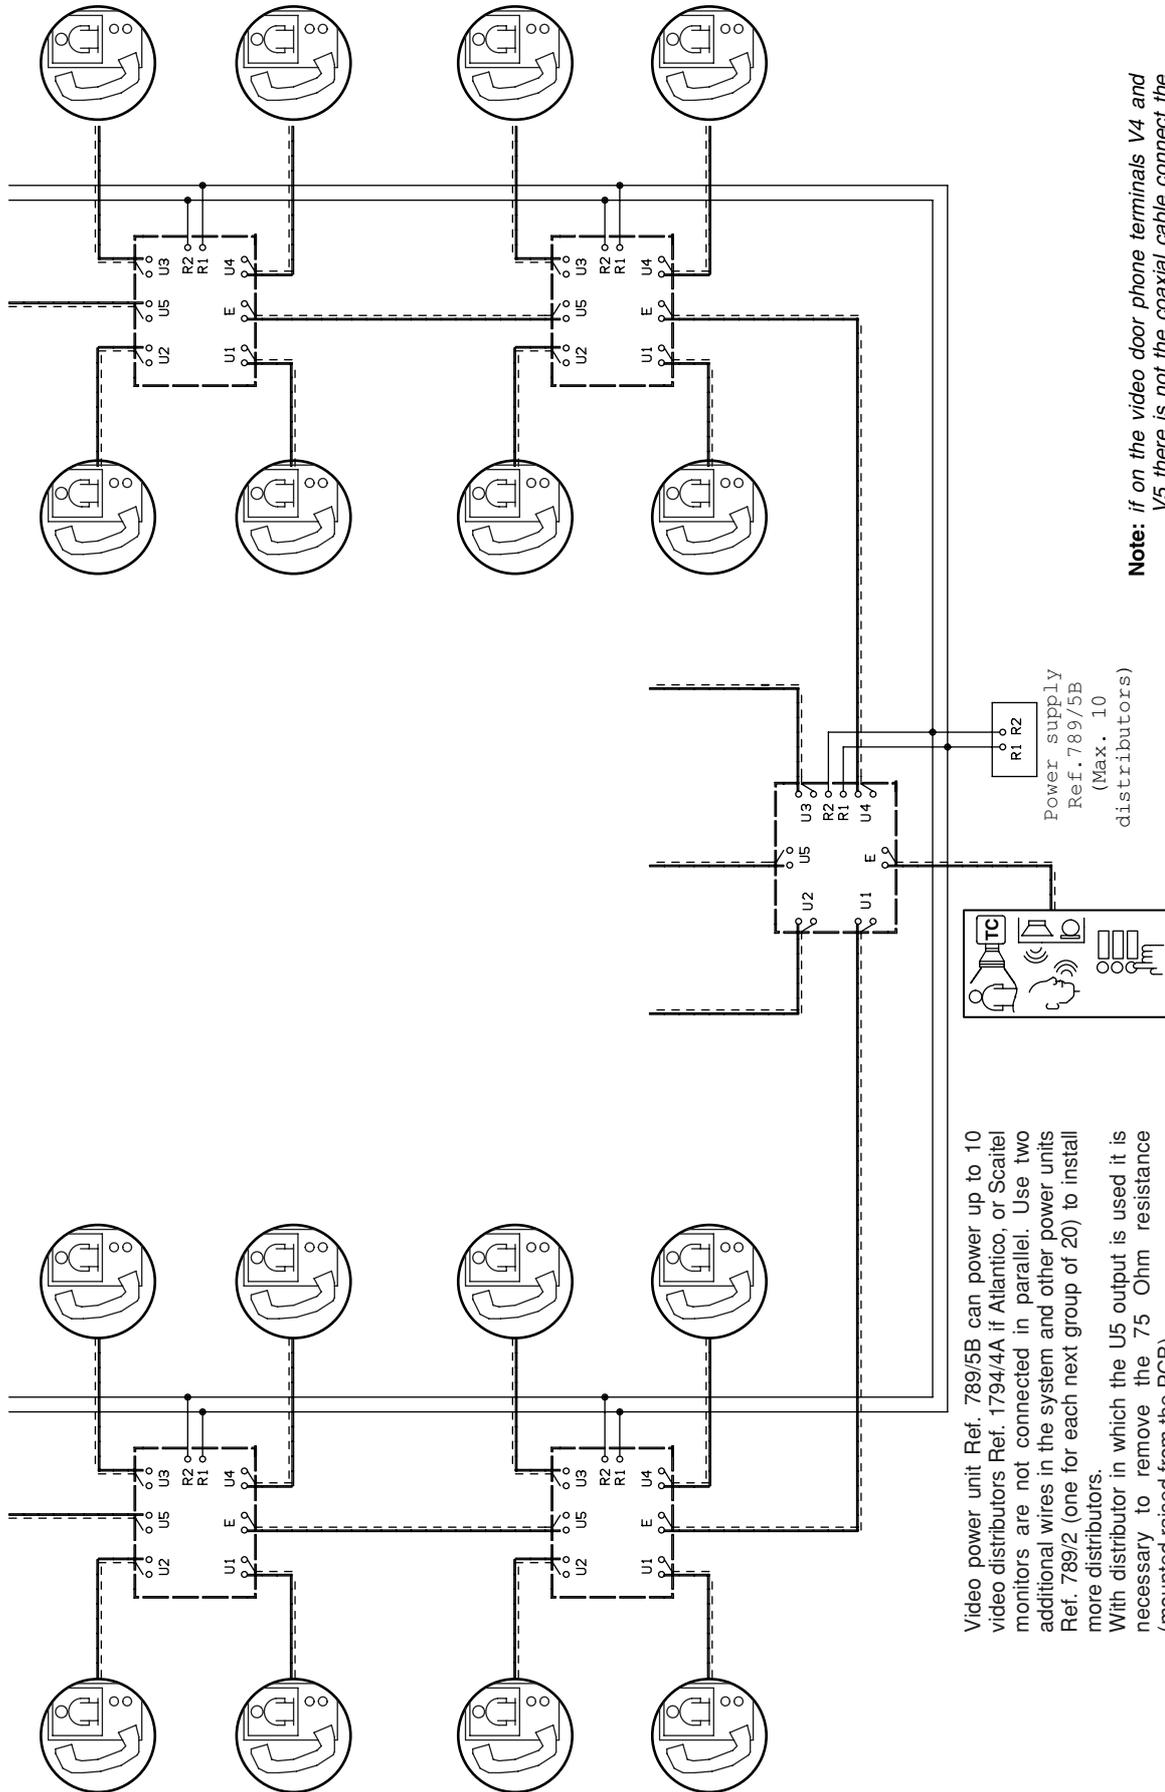

Power supply  
Ref. 789/5B  
(Max. 10  
distributors)

**Note:** if on the video door phone terminals V4 and V5 there is not the coaxial cable connect the 75Ω 1/4W resistance.

SEVERAL RISER

IN EACH RISER THE CABLE CONNECTION IS MADE WITH DISTRIBUTION TO THE FLOORS

Video power unit Ref. 789/5B can power up to 10 video distributors Ref. 1794/4A if Atlantico, or Scatell monitors are not connected in parallel. Use two additional wires in the system and other power units Ref. 789/2 (one for each next group of 20) to install more distributors.  
With distributor in which the U5 output is used it is necessary to remove the 75 Ohm resistance (mounted raised from the PCB)

**Note:** if on the video door phone terminals V4 and V5 there is not the coaxial cable connect the 75Ω 1/4W resistance.

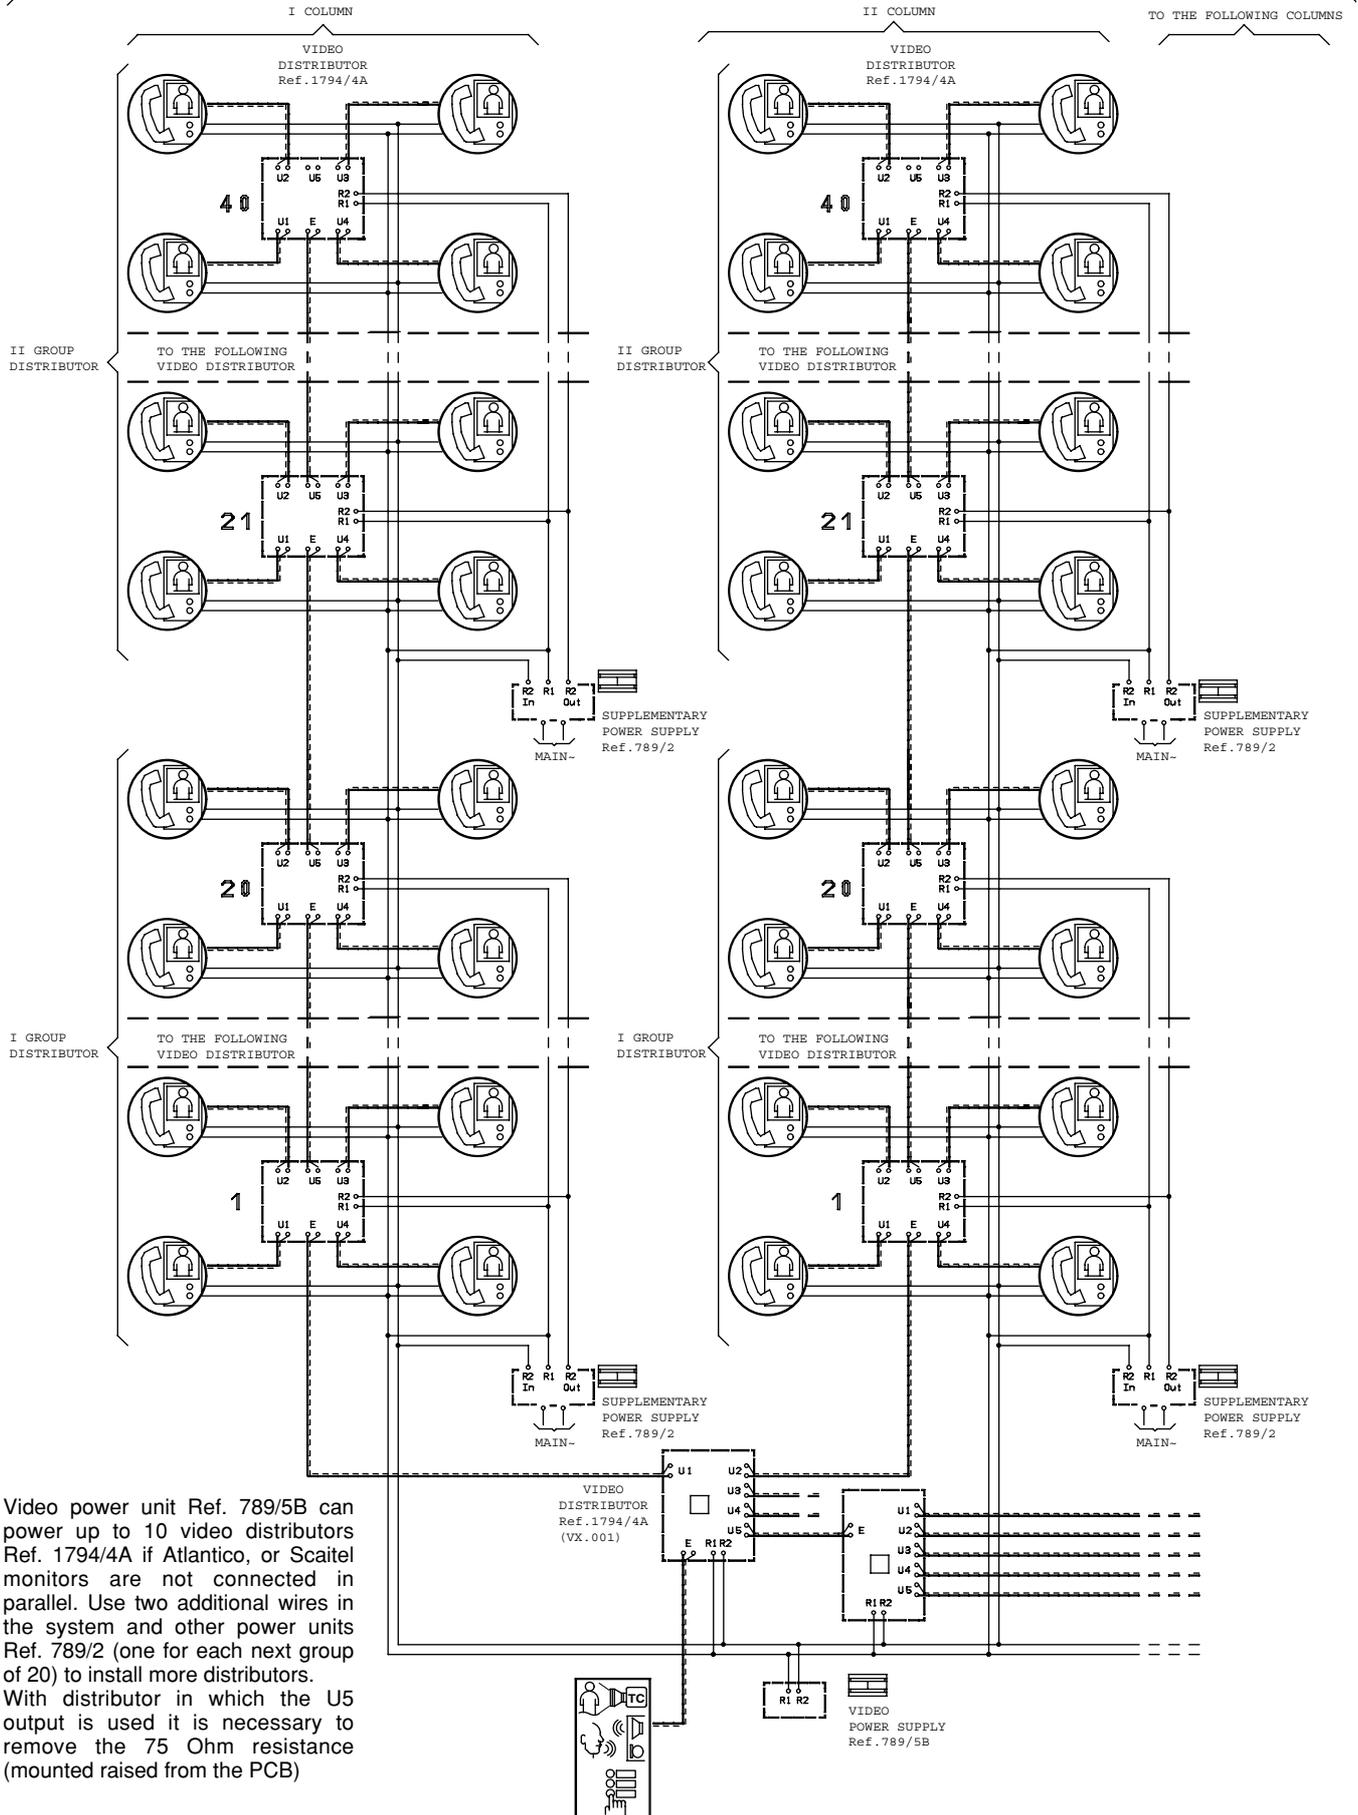

EXAMPLES OF COAXIAL CABLE CONNECTION

SV102-3296A

SEVERAL COLUMNS

Video power unit Ref. 789/5B can power up to 10 video distributors Ref. 1794/4A if Atlantico, or Scatitel monitors are not connected in parallel. Use two additional wires in the system and other power units Ref. 789/2 (one for each next group of 20) to install more distributors. With distributor in which the U5 output is used it is necessary to remove the 75 Ohm resistance (mounted raised from the PCB)

LIST OF AVAILABLE FUNCTIONS												
Number of main video door phone panels to be installed												
Number of video door phone secondary panels to be installed												
Number of main door phone panels to be installed												
Number of secondary door phone panels to be installed												
Single calls from panel: each user has its own call button												
Calls from panel in parallel: each user has several video door phones in the apartment												
Intercom function: users can communicate with each other												
Auto-on: users can switch the video door phone on also if no call is received												
Monitor with CCTV cameras												
Use of some door phones for audio service only												
Use of devices in parallel with a video door phone												
Distance between video door phones and video door unit from 300 to 1000 metres												
Use of kits
